PROFESSIONAL PROFILE

Python Backend Developer with 3+ years of hands-on experience building scalable, secure, and production-ready systems. Skilled in Django, Django REST Framework, and Frappe/ERPNext. Strong background in designing REST APIs, optimizing PostgreSQL databases, building ERP ecosystems, and integrating modern AI services (OpenAI, Gemini, Yandex SpeechKit) into real business workflows. Comfortable owning end-to-end product delivery — from on-site business analysis to architecture, implementation, and deployment.

WORK EXPERIENCE

Python Backend Developer

DIVIDEND GROUP LLC — Tashkent • December 2025 – Present

- Took full ownership of end-to-end technical delivery — system architecture, technology stack selection, and deployment — to solve real business challenges.
- Conducted on-site business audits to study offline workflows and translated complex operational needs into a fully digitalized enterprise architecture.
- Architected and single-handedly deployed a full-scale ERP ecosystem on **Frappe / ERPNext** for a multi-branch restaurant and warehouse network with **60+ employees**.
- Integrated Face ID hardware terminals directly into the ERPNext core, fully automating HRMS workflows and employee attendance tracking.
- Engineered resilient offline and online desktop POS systems using **PyQt6**, ensuring smooth and uninterrupted daily operations across all branches.
- Digitalized and automated core corporate modules — Manufacturing workflows, KPI tracking, and advanced Accounting — including real-time P&L, Balance Sheet, and Cashflow reporting.
- Built a reusable AI Voice Reporting module for Frappe / ERPNext: business owners ask questions by voice (**OpenAI** for STT), reports are generated with **Gemini 2.5 Pro**, and answered back via **Yandex SpeechKit** — with switchable AI providers.

Python Backend Developer

BILIM TECH LLC — Tashkent • March 2024 – September 2025

- Designed and built the core backend infrastructure for the **astrum.uz** platform with strong reliability, security, and performance.
- Integrated third-party APIs (Eskiz.uz, etc.uz, Bitrix24 CRM) to fully automate lead and deal generation.
- Delivered production-ready backend systems for **Dreams-Funded** and **Astronaut-Trader**, including secure dashboards with real-time monitoring and crypto payment gateways (USDT, ETH, BTC).
- Provided technical leadership and code reviews for **100+ junior developers**, helping them build scalable REST API solutions.

Data Scientist

BILIM TECH LLC — Tashkent • September 2023 – March 2024

- Built reliable web scraping pipelines in Python to automate the collection and processing of large unstructured datasets.
- Performed data analysis and built clear visualizations using Pandas, NumPy, Matplotlib, and Seaborn to deliver useful business insights.
- Designed and integrated machine learning models for analytical tasks, tuning algorithms for higher accuracy.

Python Backend Developer

UC-Coding — Tashkent Region • November 2022 – September 2023

- Developed scalable backend solutions for large platforms (**Gipermart**, **Absolvo Bona Fides**) and integrated the Payme payment gateway.
- Led the migration of legacy systems from Django 2 / GraphQL to Django 3+ with REST API, improving scalability and reducing technical debt.
- Designed reliable high-load architectures with strong attention to security and fault tolerance.

TECHNICAL SKILLS

- **Backend & Frameworks:** Python, Django, Django REST Framework (DRF), Celery, WebSockets
- **ERP & Desktop:** Frappe / ERPNext, PyQt6 (desktop POS systems)
- **AI Integrations:** OpenAI (STT, GPT models), Google Gemini, Yandex SpeechKit (TTS)
- **Databases & Caching:** PostgreSQL, MySQL, Redis
- **DevOps & Tools:** Docker, Linux, Git, NGINX, Gunicorn, Postman
- **Frontend (working knowledge):** React, TypeScript, HTML, CSS, Tailwind CSS
- **Data & Computer Vision:** Pandas, NumPy, Matplotlib, Seaborn, scikit-learn, OpenCV
- **Integrations:** Payme, Eskiz.uz, etc.uz, Bitrix24 CRM, Face ID hardware, Crypto gateways (USDT, ETH, BTC)
- **Practices:** REST API design, Clean Architecture, Code Review, Agile

KEY PROJECTS

FinTrack — Personal Finance Management Platform

- Built a full-stack personal finance platform — **winner of the CBU Coding Challenge** — for managing incomes, expenses, accounts, debts, budgets, and family-shared finances.
- Designed multi-currency accounts (UZS, USD, EUR, RUB) with automatic balance updates and inter-account transfers including currency conversion.
- Integrated an AI assistant that uses **OpenAI** for voice-to-text input and **Gemini** for smart financial analysis, category predictions, and personalized recommendations.
- Delivered budgeting, debt tracking, and analytics modules with category-based statistics and yearly, monthly, weekly, and daily views — fully responsive web and mobile UI.
- **Tech stack:** Python, Django, DRF, React, TypeScript, PostgreSQL, OpenAI, Gemini.

Jazira — ERP System with AI Voice Reporting

- Architected and deployed a full ERPNext-based system for a multi-branch restaurant and warehouse network with **60+ employees**.
- Built a reusable Frappe app for AI-powered voice reports — business owners ask questions by voice (e.g. 'Prepare a counterparty report for February') and receive a spoken answer back.

- Pipeline: **OpenAI** (STT) → **Gemini 2.5 Pro** (analyzes ERP report data) → **Yandex SpeechKit** (TTS). AI providers can be switched from settings.
- Integrated Face ID hardware terminals for HRMS attendance, and built offline and online desktop POS systems with PyQt6.
- **Tech stack:** Python, Frappe / ERPNext, PyQt6, OpenAI, Gemini, Yandex SpeechKit, PostgreSQL.

Astronaut-Trader — Prop Trading Platform

- Built a full-stack trading platform with user registration, trading challenges, and account management.
- Developed secure dashboards, real-time performance tracking, and evaluation workflows.
- Implemented a real-time **KYC verification system** with **OpenCV** (face detection and liveness checks) and **WebSockets** (live status updates), enabling fast and secure user onboarding.
- Integrated crypto payment gateways (USDT, ETH, BTC) with automated transaction handling.
- **Tech stack:** Django, DRF, React, WebSockets, OpenCV, PostgreSQL.

Dreams-Funded — Prop Trading Platform

- Developed a full-stack platform for user onboarding, deposits, and 30-day trading challenges.
- Built interactive dashboards, secure account management, and clean REST APIs.
- Built a **KYC verification flow** using **OpenCV** for document and face validation, and **WebSockets** for instant verification feedback.
- Integrated crypto payment gateways with automated deposit and withdrawal flows.
- **Tech stack:** Django, Tailwind CSS, WebSockets, OpenCV, PostgreSQL.

Gipermart.uz — E-commerce Platform

- Migrated legacy Django 2 / GraphQL system to Django 3+ with REST API architecture.
- Integrated the Payme payment gateway for a smooth checkout experience.
- Optimized PostgreSQL queries and overall backend performance for a smoother shopping experience.
- **Tech stack:** Django, REST API, PostgreSQL.

EDUCATION

Qwasar Silicon Valley — Software Engineering & Data Science

Associate Data Scientist / Software Engineer • Nov 2021 – Jan 2023

- Completed 56 hands-on projects in Python, data wrangling, visualization, and machine learning, aligned with Silicon Valley standards.

Yuqori-Chirchik Professional School — Information Technology

Digital Information Processing • Graduated 2022

LANGUAGES

Uzbek (Native) • **English** (Intermediate, B1) • **Russian** (Elementary, A2)
